CLAIMS

What is claimed is:

a method for storing synchronization information for subsequent playback of 2 an event on a plurality of client apparatuses, comprising the steps of: providing an event stored in memory on at least one of the client apparatuses, 3 (a) wherein the client apparatuses and a host computer are adapted to be 4 connected to a network; 5 storing information on the host computer for allowing the simultaneous 6 (b) playback of the event from the memory on each of the client apparatuses; and 7 allowing the information to be downloaded utilizing the network for 8 (c) playback after the simultaneous playback. 9 1 A method as recited in claim 1, wherein the event includes a video and audio 2. 1 2 presentation. A method as recited in claim 1, wherein the information includes a history 1 3. and data associated with the simultaneous playback. 2 1 A method as recited in claim 1, wherein the network is a wide area network. 1 4. 1 A method as recited in claim 1, wherein the memory includes a digital video 5. 2 disc (DVD). A method as recited in claim 7, wherein the information includes chapter information associated with the DVD. A computer program embodied on a computer readable medium for storing synchronization information for subsequent playback of an event on a plurality of client apparatuses, comprising:

5 6

(a)

a code segment for providing an event stored in memory on at least one of the client apparatuses, wherein the client apparatuses and a host computer are adapted to be connected to a network;

a code segment for storing information on the host computer for allowing the simultaneous playback of the event from the memory on each of the client 8 9 apparatuses; and a code segment for allowing the information to be downloaded utilizing the 10 (c) network for playback after the simultaneous playback. 11 1 A computer program as recited in claim 7, wherein the event includes a video 8. 1 and audio presentation. 2 A computer program as recited in claim 7, wherein the information includes 1 9. a history and data associated with the simultaneous playback. 2 1 A computer program as recited in claim 7, wherein the network is a wide 10. 1 2 area network. 1 A computer program as recited in claim 7, wherein the memory includes a 11. 1 2 digital video disc (DVD). A computer program as recited in claim 7, wherein the information includes chapter information associated with the DVD. A system for storing synchronization information for subsequent playback of an evention a plurality of client apparatuses, comprising: logic for providing an event stored in memory on at least one of the client 3 (a) apparatuses, wherein the client apparatuses and a host computer are adapted 4 to be connected to a network; 5 logic for storing information on the host computer for allowing the 6 (b) simultaneous playback of the event from the memory on each of the client 7 apparatuses; and 8 logic for allowing the information to be downloaded utilizing the network for 9 (c) playback after the simultaneous playback. 10 1 A system as recited in claim 13, wherein the event includes a video and audio 14. 1 2 presentation.

A system as recited in claim 13, wherein the information includes a history and data associated with the simultaneous playback.

1 16. A system as recited in claim 13, wherein the network is a wide area network.

1 17. A system as recited in claim 13, wherein the memory includes a digital video disc (DVD).

1 18. A system as recited in claim 13, wherein the information includes chapter information associated with the DVD.
